adamhickey

Senior Product Designer

Twenty years designing complicated enterprise software. My work has moved from interface craft, to design systems and governance at scale, to designing and building working products with coding agents.

Independent

- **Product design and prototyping**

  2026 – Present

  Designed and built Agent Review, a React and TypeScript prototype for handing UI work to coding agents, with written design rules and automated checks marking where automation ends and human judgment begins. Also Dispatch Cockpit, a decision-support prototype for expert dispatchers, and two products in use, Lucy Learns and Door County Found.

RBA Inc

- **Lead UX Product Designer**

  2013 – 2026

  Led enterprise product design and UX strategy for clients in manufacturing, healthcare, financial services and the public sector. Built and governed design systems on SAP, Microsoft, Umbraco and Sitecore, and led the accessibility, DesignOps and governance practices.

Selected work

40+ SAP applications on one design system and accessibility standard: about a third less time from design to development, and UI defects in production cut roughly in half.

A USDA grant-management portal that cut operational overhead 80%.

Sprout, a design system for Cargill: tokens in the code, mirrored as Figma variables under a written sync contract.

Real-time logistics for a 450+ truck fleet: the decision surface for a dispatcher short on attention rather than data.
